

FILE COPY Weekly Weather Crop Report

Week Ending: August 11, 1996

Released 3:00 pm: August 12, 1996

According to the Mississippi Agricultural Statistics Service, there were 4.7 days suitable for fieldwork for the week ending August 11, 1996. The main farming activities for the week were harvesting hay, corn, and corn silage and spraying fields. Scattered thunderstorms have helped pastures and crops, but delayed some harvesting efforts. Soil moisture is 2 percent very short, 10 percent short, 76 percent adequate and 12 percent surplus.

Progress in Percentages						Conditions in Percentages				
Item	Event	This Week	Last Week	1995	5-Yr Avg	Very Poor	Poor	Fair	Good	Excellent

Pasture						3	7	34	46	10

County Agent Comments

"Hay producers are harvesting higher quality and increased yields since the rains started. Late planted soybeans have really improved recently. The upward surge in cattle prices brought calves to market this week. Silage harvesting is producing good yields with excellent quality."

— Dalton G. Garner, Prentiss County

"Rain continues to help pasture and hay producers. Plant bugs and boll weevils are beginning to increase in cotton. Most of the corn is beginning to mature."

— Otis L. Davis, Madison County

"Producers finally have standing hay but can't get it harvested due to rain. Pastures are looking better."

— Perry D. Kimbrough, Clay County

"Farmers continue to harvest hay — yields have significantly increased since recent rains. The corn crop is close to being mature."

— Mike Skipper, Winston County
